

User Panel

1. Design a Sign-up form and Register a User by storing information in Database. You must use php form validation before form submission.
2. After Sign-Up successfully, Design a Sign-In form and user will provide username and password. If valid user then goes to a success page and display "Register User". Otherwise, show an error message.

Admin Panel

1. After Sign-in as admin can display (View) all register user information?
